### Alfa Laval wins SEK 95 million ballast water treatment order

**Alfa Laval – a world leader in heat transfer, centrifugal separation and fluid handling – has won an order to supply ballast water treatment systems to a shipowner in Turkey. The order has a value of approximately SEK 95 million and it is booked in the Marine Separation & Heat Transfer Equipment unit of the Marine Division, with deliveries scheduled from 2019 to 2021.**

The order comprises 33 Alfa Laval PureBallast 3 systems, including deckhouses and a service agreement. The customer is one of Turkey's most prominent ship owners, and the ballast water systems will be installed throughout its fleet.

"I am very pleased to announce this big order for our PureBallast systems," says Peter Leifland, President of the Marine Division. "The order shows the confidence marine customers have in our reliable and efficient ballast water systems."

Alfa Laval PureBallast, which was the first commercially-available ballast water treatment solution, is a chemical-free technology, sold and serviced by Alfa Laval. A vital component of PureBallast is the enhanced UV reactor, which was developed jointly by Alfa Laval and Wallenius Water based on Wallenius Water technology.

**Did you know that...** all PureBallast systems today have dual type approval, both from the IMO and the U.S. Coast Guards?

#### **About Alfa Laval**

Alfa Laval is a leading global provider of specialized products and engineering solutions based on its key technologies of heat transfer, separation and fluid handling. The company's equipment, systems and services are dedicated to assisting customers in optimizing the performance of their processes. The solutions help them to heat, cool, separate and transport products in industries that produce food and
