

Alfa Laval and NIS 2

NIS 2 Directive: Impact and response at Alfa Laval

The Network and Information Security (NIS 2) Directive, adopted by the European Union, strengthens cybersecurity requirements for essential and important entities across sectors, including manufacturing and industrial technology. Its aim is to enhance resilience against cyber threats, ensure rapid incident response, and safeguard critical infrastructure.

How Alfa Laval is affected

As a global leader in heat transfer, separation, and fluid handling, Alfa Laval falls under the scope of NIS 2 due to its role in supplying critical components to industries such as energy, water, and food. The directive requires Alfa Laval to implement robust cybersecurity measures, report incidents promptly, and ensure supply chain security. Non-compliance can result in regulatory penalties and reputational risks.

Alfa Laval's approach to NIS 2 compliance

Alfa Laval proactively addresses NIS 2 requirements by:

- Strengthening its cybersecurity framework, including risk assessments, incident response plans, and continuous monitoring.
- Training employees in cyber hygiene and awareness.
- Collaborating with partners and suppliers to ensure end-to-end security.
- Regularly reviewing and updating policies to align with evolving regulations.

By integrating NIS 2 principles into its operations, Alfa Laval demonstrates its commitment to protecting customers, maintaining trust, and supporting resilient infrastructure across Europe.
