

Alfa Laval Performance Audit for PureBallast

**Evaluating performance to
ensure reliable compliance**

Knowing that your Alfa Laval PureBallast system performs as it should is vital peace of mind. After all, failure to treat ballast water sufficiently can result in heavy fines or the inability to deballast during cargo operations in port. The Performance Audit for PureBallast ensures your system is living up to its type approval and operating cost-effectively.

What we do

We carefully evaluate all functions of your PureBallast system, making sure everything works reliably. If any deterioration in performance is detected, we determine the actions needed to correct it. For example, we may recommend equipment adjustments or inform your crew of best operating practices that can reduce maintenance costs.

In addition, we perform any software updates needed to achieve the latest control standard.

Benefits

- You can be certain of fully optimized performance
- Your system retains its type approval
- You can rely on your system's uptime
- You know that your control system is up-to-date
- You reduce operating and maintenance costs

Scope of service

- Control system software upgrade
- Control system battery replacement
- Test cycle – ballasting
- Test cycle – deballasting
- Test cycle – Cleaning-In-Place (CIP), one reactor

Scope of supply

- Test Evaluation Report
