

Remote Audit Marine

Improve uptime by having Alfa Laval inspect your equipment remotely

Periodic inspections of your equipment are a smart way to handle preventive maintenance and protect uptime. When they can be done remotely, it gives you the flexibility to conduct them wherever your vessel is sailing. The information provided can be used to take corrective actions, but also to optimize maintenance schedules for performance and reliability.

Alfa Laval offers a remote way to inspect your equipment with assistance from the vessel's crew and the involvement of our service experts. All the crew has to do is answer a prepared questionnaire.

How does it work? We send you a questionnaire regarding the vessel's equipment, explaining what you should look for and tell us about. Once completed, you send the questionnaire to our experts for an evaluation of the findings. Within one week, you receive a report with our recommendations.

By implementing the recommendations, with assistance from our service engineers if needed, you can protect uptime and be better prepared for later maintenance.

For more information about this service, contact your local Alfa Laval office.

What will you receive?

- A questionnaire specific to your equipment on board
- A report with an overview of important findings
- Recommendations for corrective actions, improvements or upgrades

Benefits

- Evaluation of your equipment's condition
- Reduced risk of breakdown
- Improved uptime
- Better preparation for later maintenance

Equipment in focus:

Separators

Plate heat exchangers

Freshwater generators
