

Ten top tips

to keep Alfa Laval filters
in tip-top condition

- 1 Only use genuine parts, replace them according to maintenance plan.
- 2 Check on daily basis that pressure drop is within the accepted range, and that the electrical or hydraulic motor is running at the right pace.
- 3 Follow Instruction Book recommendations, especially start-up, maintenance plan and maintenance instructions.
- 4 Follow drain intervals for filters equipped with diversion chambers: for FO filter on a daily basis and for LO filter on a weekly basis.
- 5 Keep track of all maintenance interventions and replaced parts.

- 6 Ensure that other equipment in the fuel/lube oil system are fully functional and operational.
- 7 Ensure the key operating parameters match the original design specifications, including flow, pressures, temperatures, and viscosity.
- 8 Maintain a stock of crucial spare parts such as filters service kits.
- 9 For cleaning filter elements, only use recommended cleaning solvents.
- 10 Train your staff to the maintenance best practices. Alfa Laval service team can provide the necessary training.
