

Predictive Kits for Alfa Laval Aalborg boilers

Service kits for boilers based on vessel and fleet data

It pays to be prepared for more than your daily operations. Wear and tear are foreseeable, and having the right boiler spare parts on board lets you reduce costs and downtime by making exchanges as needed. Aalborg Predictive Kits contain parts anticipated for your needs over time, based on data from vessels and fleets similar to yours.

Security built on real needs

Service kits are always a smarter choice than ordering individual spare parts, both for your peace of mind and for your operating budget. Aalborg Predictive Kits are even smarter, because we base them on the demonstrated boiler spare parts consumption for your vessel and fleet type.

By analysing general market trends and Alfa Laval's own service and order data, our experts create an Aalborg Predictive Kit with the wear and tear parts you will likely need over time. Their recommendation is tuned to your vessel and its Aalborg boiler, as well as to the typical boiler demands in a fleet like yours.

You choose the kit duration

You decide the number of years an Aalborg Predictive Kit should cover: 1 or 3. The needs for a single year are easiest to foresee, which results in a smaller kit with more specific parts. However, choosing a kit for several years provides greater total economy – and keeps you even more self-sufficient.

To discuss spare parts for your Aalborg boilers and the ways that Aalborg Predictive Kits could benefit your fleet, simply get in touch with your local Alfa Laval sales company.

Predictive Kits in two durations

Predicted parts for 1 year of operation

- More specific parts recommendation
- Fewer parts in kit
- More frequent purchasing

Predicted parts for 3 years of operation

- Balance of overview and economy
- More parts for a wider range of scenarios
- Less frequent purchasing
