

Operator training for Alfa Laval Aalborg waste heat recovery boiler systems

Knowledge to ensure efficient system operation

Alfa Laval equipment is built to the highest of standards. To get the most out of your equipment, you need to know how to operate it properly. Completing an operator training course is the best way to ensure that your team is able to operate your Alfa Laval equipment in a safe and efficient manner.

Our operator training is aimed at operators working with waste heat recovery boiler systems in power plant and industrial applications. The training is designed to enable operators to run their boiler systems efficiently and with confidence.

The course consists of classroom training combined with practical exercises. It can be held at the Alfa Laval Aalborg training center in Finland or on-site at a customer location. Participants will receive a certificate upon successful course completion.

Benefits

- Improve operators' knowledge of boiler operation
- Increase safety and plant operating reliability
- Plan and conduct maintenance at the correct intervals
- Optimize operating and maintenance costs

Course overview

The course starts with an introduction that provides general information about the steam production process as well as specific information about the boiler system and equipment that the operators work with. The course continues with deeper information about boiler system operation, water treatment and troubleshooting.

Operation

Proper boiler system operation and the operational tasks involved are at the heart of the course. These tasks include the boiler system start-up and heating procedures, daily operational tasks, shutdown procedures and short- and long-term shutdown storage procedures.

Water treatment

In order to ensure trouble-free operation and a long boiler system lifetime, water treatment is essential. During the course the participants will learn about boiler water quality requirements, testing and treatment methods.

Troubleshooting

Last but not least, the course includes training on the possible problem situations the operators may face with their steam boiler systems. Recognizing symptoms, finding the root cause and taking proper action to fix the problem are all part of the course.

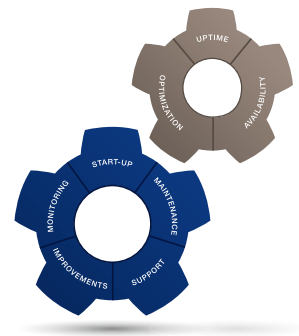

Operator training is always tailored to your specific boiler system, so contact us today:
