

Marine Service

Alfa Laval's dry dock service offering in China

Your vessel depends on a variety of expensive equipment. To keep your ship operating smoothly – and cost-effectively – proper maintenance of that equipment on a routine basis is vital.

As a developer and manufacturer of marine technology, we at Alfa Laval are always looking for new innovations that keep your equipment working like new – and sometimes even better! After all, who is better suited to help you maintain your equipment than the original supplier?

Many maintenance, overhaul and upgrade services can be performed during dry docking. Our dry dock service offering is shown on the following page. Please note that some of these services can also be performed while your vessel is in operation.

As with anything, the better the planning – the better the results. Prior to docking, we perform a boiler inspection while your vessel is in the harbour. In addition we can conduct a performance audit which also entails a discussion with advice for your crew, which is followed by a proposal with recommended actions for improving the operation of your equipment – and, in turn, your entire vessel.

Pre-inspection service

Products	Scope	Why	Why Alfa Laval
Boilers	Boiler pressure part inspection	Ensure limited internal fouling to improve highest efficiency	As OEM, AL is aware of crucial areas and latest developments
Major products	Performance audit marine	Will provide an up to date report in order to plan any potential repair, service or upgrade well in advance of the dry-docking. In addition our service engineer will advise the crew onboard on maintenance and overhaul	Fixed and competitive price in specified harbours by the most competent company to do the survey

Dry dock service

Products	Scope	Why	Why Alfa Laval
