

ALLFUEL, fuel transfer pump upgrade for boilers

Easy pump maintenance that minimizes downtime

ALLFUEL is a fuel transfer pump upgrade and the answer to issues caused by today's fuel sulphur legislation. Lower sulphur levels in marine gas oil mean lower lubricity, which in turn leads to higher pump wear and increased maintenance.

The upgrade replaces the existing fuel transfer pump for your Alfa Laval Aalborg boiler with an ALLFUEL Generation 2 pump. The ALLFUEL pump has an innovative design with a one-piece insert unit, which makes it quick and easy to maintain, upgrade or repair.

Exchanging the ALLFUEL pump insert can be done in a third of the traditional maintenance time. Combined with the high insert performance and overall pump durability, this means greater uptime for the pump – and consequently your boiler.

Benefits

- Easily installation – fixed unit ready to plug in
- Fast and easy maintenance – simple one-piece inserts
- High operating reliability and efficiency
- Few spare parts to store
- Short payback time

Scope of supply

- **Ready-to-install kit**

The ALLFUEL fuel transfer pump upgrade is provided as a standard kit with everything needed for complete installation. The installation can be handled by one of your own engineers, with or without support from an Alfa Laval service engineer.

- **Pump inserts**

ALLFUEL one-piece inserts are available directly from Alfa Laval. Each insert comprises a pre-assembled unit with liner, spindle set, mechanical seal, bearing and cover. Because all pump sizes use the same type of bearing and mechanical seal, fewer spare parts are needed on board where multiple pumps exist.
