Superior Mixing – Liquid, Gas and Powder
Alfa Laval IM 15 Rotary Jet Mixer

The patented IM 15 Rotary Jet Mixer (RJM) does not only mix fast, efficient and uniform but creates also the necessary process flexibility that makes it easy to switch to new product formulations with diverse viscosities, densities and volumes. Besides classic liquid to liquid mixing the RJM is excellent for gas and powder dispersion plus a superb tank cleaning machine.

Applications
Process and storage vessels between 530 – 26400 US gallon used in a wide range of industries such as: beer & beverage, food & ingredients, home & personal care, health care, biotech and chemical industry etc.

Operation
Secure that the mixer is positioned in the correct level and submerged into the liquid before round pumping or when adding any additional products from any up-stream pipe works.

TECHNICAL DATA

Lubricant: .................................. Self-lubricating with the mixing/cleaning fluid
Connection: ................................. Standard thread 1.5” BSP or NPT, female
Min. tank opening: ..................... See dimension drawings

Pressure
Working pressure: .......................... 28-171 PSI
Recommended pressure during mixing: 28-85 PSI
Recommended pressure during CIP: .............. 72-94 PSI

PHYSICAL DATA

Materials: ..................................... AISI 316L, AISI 316, SAF 2205, PTFE, PEEK, Tefzel, Ceramics

Weight: ....................................... 13.6 lbs

Temperature
Max. working temperature: ................. 203°F
Max. ambient temperature: ............... 284°F

Benefits
Using the IM 15 Rotary Jet Mixer makes it possible, at a modest investment, to perform fast and efficient mixing in a sanitary system. In traditional systems, using propeller mixers, a rotating shaft penetrates the tank wall, and a mechanical seal and a gear box are installed. With the Rotary Jet Mixing technology the shaft, seal and gearbox are eliminated, and a more sanitary design is obtained. With the Rotary Jet Mixing technology good mixing is achieved without the use of baffles. The Rotary Jet Mixer can also be used for gas dispersion and for dispersion and dissolving of powder. The IM 15 can furthermore be used for efficient CIP when the tank is empty, saving liquid, chemicals and energy compared to a fixed spray ball CIP system.
Flow rate
Relationship between inlet pressure and flow rate for liquids with waterlike properties for the IM 15 Rotary Jet Mixer.

Reach of jet
Reach of jet (impact cleaning) for the IM 15 during cleaning, and indicative reach of jet for mixing of liquids with water-like properties.
The Rotary Jet Mixing technology

Traditional Mixing technology

Round pumping  Propeller mixing

A = Rotary Jet Mixer
B = Gas
C = Product
D = Liquid feed

A = Liquid feed
B = Product
