

Factors affecting your total cost of ownership

Cost reduction: sludge transportation and disposal

To maximize your equipment's life cycle and minimize total cost of ownership over time, you need to ensure full reliability and top performance.

What costs you most?

Your initial investment represents a very small part of the decanter's total lifetime cost. Instead, sludge transportation and disposal is often the biggest cost driver for a decanter over time. In markets where the cost for sludge disposal is particularly high, this can represent about 80% of the total operational cost for a large decanter.

Savings potential

Alfa Laval service optimizes the efficiency of your decanter over time and ensures you receive the proper maintenance to secure uptime. The result is significant savings in sludge transportation and disposal costs due to:

- Higher cake dryness % over time
- Minimum transport of excess sludge

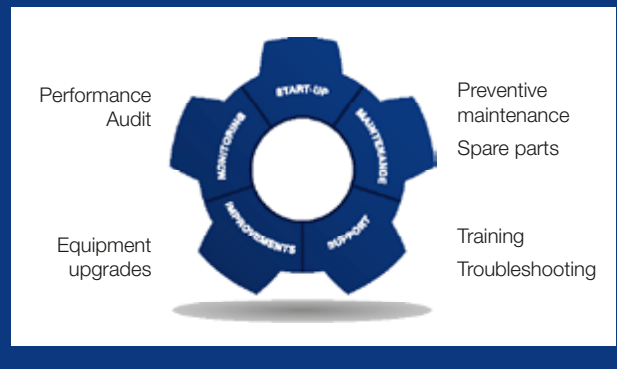

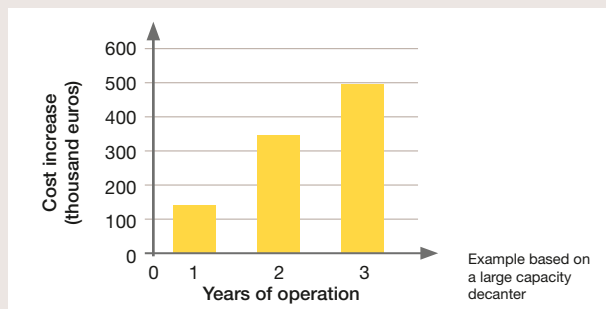

360° service that pays

The best way to minimize the total cost of ownership for your decanter is to use service solutions from Alfa Laval. Our comprehensive 360° service portfolio features offerings specifically designed to reduce costs for sludge transportation and disposal.

By choosing Alfa Laval, you get the perfect long-term partner for your daily operations. Our extensive global service network reaches you anywhere you are.

The cost of 1%

You know dryer is better, but do you know the real value? This is the increase to sludge transportation and disposal costs when cake dryness drops by just 1%. Having a strategy to increase cake dryness as much as possible keeps your cost of ownership low.
