2 Safety

Unsafe practices and other important information are emphasized in this manual. Warnings are emphasized by means of special signs.
Always read the manual before using the tank cleaning machine!

2.1 Important information

WARNING
Indicates that special procedures must be followed to avoid serious personal injury.

CAUTION
Indicates that special procedures must be followed to avoid damage to the tank cleaning machine

NOTE
Indicates important information to simplify or clarify procedures.

2.2 Warning signs

General warning:
3.1 Introduction

This manual has been prepared as a guide for installing, operating and maintaining your Alfa Laval Toftejorg Rotary Spray Head tank cleaning machine. Should you require further assistance, our Technical Sales Support department and worldwide net of sales offices are pleased to help you. Please quote the type, article and serial numbers with all of your enquiries; this helps us to help you.

This manual covers the Alfa Laval Alfa Laval Toftejorg SaniMxxxx SB (Slide Bearing) series that consists of four main product series; the Alfa Laval Toftejorg SaniMidget SB, the Alfa Laval Toftejorg SaniMidget SB UltraPure, the Alfa Laval Toftejorg SaniMagnet SB and the Alfa Laval Toftejorg SaniMega SB. All versions are similar in design. Differences are in material selection for the rotor and dimensions.

The Alfa Laval Toftejorg SaniMidget SB UltraPure is equipped with a rotor made from USP Class VI certified material and the Alfa Laval Toftejorg SaniMxxxx SB is equipped with a rotor made from material that meets the 3-A Sanitary Standard 20-25. The USP Class VI polymer used has not been part of the 3-A Third Party Verification (TPV). Consequently the Alfa Laval Toftejorg SaniMidget SB UltraPure has not been verified to meet 3-A Sanitary Standards.

Important information: Before installing the machine and setting it into operation, carefully read the General Installation Instructions (page 11), the special conditions for safe use in accordance with ATEX Certification Directive 94/9/EC valid until 2016-04-19/Directive 2014/34/EU valid from 2016-04-20 (page 13) and the General Safety Precautions (page 13) and take all necessary precautions according to your application and local regulations.

NOTE
The illustrations and specifications contained in this manual were effective at the date of printing. However, as continuous improvements are our policy, we reserve the right to alter or modify any unit specification on any product without prior notice or any obligation

The English version of the instruction manual is the original manual. We make reservations in regard to possible mistranslations in language versions of the instruction manual. In case of doubt, the English version of the instruction manual applies.

3.2 Intended Use

End-user should verify:
- that the tank cleaning machine is in conformity with respect to tank, vessel or container size in which it is used.
- that the construction materials (both metallic and non-metallic) are compatibility with product, flushing media, cleaning media, temperatures and pressure under the intended use.

Important information: Liquid inlet pressure: Max. 4 bar.
Do not steam: Steaming through the Rotary Spray Head may result in excessive high rotation speed of the cleaner and cause severe wear of the ball bearing and/or damage to the cleaner.

See General Installation Instructions on page 11 of this manual for information on recommended installation position.
3 Introduction

3.3 Patents and Trademarks

This Instruction Manual is published by Alfa Laval Kolding A/S without any warranty. Improvements and changes to this Instruction Manual may at any time be made by Alfa Laval Kolding A/S without prior notice. Such changes will, however, be incorporated in new editions of this Instruction Manual.

Alfa Laval, Kolding A/S. All rights reserved.

The Alfa Laval logotype is a trademark or a registered trademark of Alfa Laval Corporate AB. "Toftejorg" is a trademark or registered trademark of Alfa Laval Kolding A/S. The Alfa Laval Toftejorg™ SaniMxxx SB series product has patent in the US (US 8,137,481). Other products or company names mentioned herein may be the trademarks of their respective owners. Any rights not expressly granted herein are reserved.

3.4 Quality System

The Alfa Laval Toftejorg SaniMxxxx SB and Alfa Laval Toftejorg SaniMidget SB UltraPure are designed to meet 3-A Sanitary Standards as well as the guidelines of the European Hygienic Design Group (EHEDG) and thus comply with requirements to design, materials, finish and documentation.

Third Party Verification (TPV) shows that the Alfa Laval Toftejorg SaniMxxxx SB meets the requirements of the 3-A Sanitary Standard 78-01 and EHEDG certificate of cleanability according to EHEDG doc. 2 shows the machines self cleanability features. All machines are produced according to Alfa Laval Kolding’s ISO 9001 international Standard certified quality system.

3.5 Marking

Alfa Laval tank cleaning machines are all marked to allow recognition of machine type, machine name, Serial number and manufacturing address. The marking is placed on the body of the tank cleaning machine.

Rotary Spray Head
SaniMxxx SB
s/n.: yyyy-xxxxx
Alfa Laval, DK-6000 Kolding, Albuener 31

CE

Rotary Spray Head
SaniMxxx SB
s/n.: yyyy-F/S-xxx
Alfa Laval, DK-6000 Kolding, Albuener 31

CE
3.6 ATEX Marking

Alfa Laval tank cleaning machines are all marked to allow recognition of machine type, machine name, Serial number and manufacturing address. The marking is placed on the body of the tank cleaning machine.

Serial number explanation
Machines supplied with or without normal documentation:
  yyyy-xxxxx: serial number
  yyyy: year
  xxxxx: 5 digit sequential number

Serial number explanation
Machines supplied with Qualification Documentation package incl. FAT-SAT
  yyyy-F/S-xxx: serial number
  yyyy: year
  xxxx: 3 digit sequential number

Changes to the machines are not allowed without approval by the person responsible for the ATEX certification at Alfa Laval Tank Equipment. If changes are made – or spare parts other than Alfa Laval original spare parts are used - the EC Type Examination certification (the ATEX Directive) is no longer valid.

Important ATEX information: See also page 20 ff regarding special conditions for repair of ATEX certified machines.
4 Installation

4.1 General Description

The Alfa Laval Toftejorg SaniMxxxx SB series are tank cleaning machines intended for industrial use in closed tanks, vessels and containers under typical CIP procedures. They have a broad range of application areas within pharmaceutical, food, dairy and chemical industries.

The Alfa Laval Toftejorg SaniMxxxx SB is a sanitary cleaning device of the rotating fan spray type for permanent installation that provides either a 270° upward cleaning pattern or a 360° cleaning pattern. The machine is designed to be completely self-cleaning as proven by the EHEDG test method. If installed according to the description on page 11, the Alfa Laval Toftejorg SaniMxxxx SB is completely self-draining in the shown position and completely inspectable. All product contact surfaces are AISI 316L stainless steel or polymer material that conforms to FDA21CFR§177 and EU 10/2011. For the Alfa Laval Toftejorg SaniMxxxx SB plastic material that meets the requirements of 3-A Sanitary Standard 20-25 is used. For the Alfa Laval Toftejorg SaniMidget SB/UltraPure a USP Class VI plastic material is used.

The unique design is totally free of weldings, threads, screws and press-fits to facilitate self-cleanability. The cleaning device is lubricated by the cleaning media. No oil, grease or other lubricants are used.

The Alfa Laval Toftejorg SaniMxxxx SB is designed for use in pharmaceutical, biotechnological, food and dairy processing applications. It may be used in reactors, mixing/processing tanks, spray dryers and other process equipment with a volume from 7.5-220 m³ (2-60,000 US gallons)*. For larger volumes, multiple Alfa Laval Toftejorg SaniMxxxx SB's may be applied.

* to comply with EU 10/2011 the minimum batch size should be considered. For more information see Declaration of EU 10/2011 conformance page 34.

Application assistance and recommendations for optimal position is available.

4.2 Functioning

The flow of cleaning media comes through the down-pipe, flushes the connector and exists through the bearing surfaces, slots and leakage passages. This causes the head of the Alfa Laval Toftejorg SaniMxxxx SB to rotate, with fans of water laid out in a swirling pattern on the entire perimeter exposed to the spray pattern. This generates a vibrating impact in the impact pattern and a dynamic cascading flow that covers all internal surfaces of the tank, vessel or reactor.

The Alfa Laval Toftejorg SaniMxxxx SB is (as the rest of the UltraPure and Sani portfolio) designed according to GMP – compliant materials, self-cleaning and drainable. The self-cleaning feature of the device is due to the unique design that includes cleaning of the downpipe. The device is designed with no hindrance to gravity draining. The patented easy assembly and disassembly of the device allows for only one clip to be used and without any press fits. Upon removing the clip this ensures that no parts can fall into the tank (the Alfa Laval Toftejorg SaniMxxxx SB must be held in one hand and the clip in the other hand).

Spray pattern

360°

270° up
4 Installation

4.3 General Installation Instructions

It is recommended to install a filter with mesh size 250 µm (0.01") in the supply line to avoid particles, scale etc. from clogging the inside of the cleaner. However, particles up to 0.8 mm can pass the cleaning slots in the rotor.

Before installation, all supply lines and valves must be thoroughly flushed to remove remains from welding, grinding dust, scale and other foreign matter. During handling and installation handle the machine with care in order not to damage the fine surface of the machine.

Randomly selected Alfa Laval Toftejorg SaniMxxxx SB machines are tested at the factory before shipping, in accordance with “Test Requirements for SaniMxxxx SB”.

</tr>
</tbody>
</table>

**Note:** The machine shall be installed in accordance with national regulations for safety and other relevant regulations and standards. In EU-countries the complete system must fulfill the EU-Machinery Directive and depending of application, the EU-Pressure Equipment Directive, the EU-ATEX Directive and other relevant Directives.
4 Installation

Note: Only valid for Alfa Laval Toftejorg SaniMidget SB:

Please note that when doing installation or re-assembly, the rotor must be placed correctly according to below drawing in order to ensure normal operation.

The arrow on the rotor shows the flow direction.

**Correct orientation of rotor**

Note: Flow direction

---

**Important information:**

**Recommended installation position:**
The Rotary Spray Head tank cleaning machine should be installed in vertical position (upright or upside down). If the machine is installed in any angle to vertical, the life time may vary. If installing at an angle to vertical, ensure that the clip cannot fall out by gravity. To maintain drainability, the device should not be tilted more than 25° to vertical.

**ATEX Warning**

If the machine is used in potential explosive atmospheres, tapes or joint sealing compounds which are electrical insulators must not be used on threads or joints, unless an electrical connection is otherwise established to ensure an effective earthing. In addition, connecting pipe work, must be electrically conductive and earthed to the tank structure. The resistance between the nozzles and the tank structure should not exceed 20,000 Ohm. This is essential to avoid the build-up of static electricity on the machine.

For further information see til IEC/TS 60079-32-1:2013, guidance and recommendations for the avoidance of hazards due to static electricity.
4.4 General Safety Precautions

The Alfa Laval Toftejorg SaniMxxxx SB is intended for use inside a tank only, and must not be operated in open air or when the tank is open.

**Warning:** Precautions shall be made to prevent starting the cleaning operation, while personnel are inside the tank or otherwise can be hit by water jets from the cleaner head.

**Warning:** In case potentially explosive liquids are used, precautions should be taken against incidental creation of an explosive mixture with oxygen in the tank atmosphere.

4.5 Special Conditions for Safe Use in Accordance with ATEX Certification

Directive 94/9/EC valid until 2016-04-19
Directive 2014/34/EU valid from 2016-04-20

**ATEX Warning:** The unit may be operated, in a hazardous area, only when filled with the process fluid.

**ATEX Warning:** **Working temperature max.**
- The maximum permitted process fluid temperature and ambient temperature when the machine is operating is 95°C.
- **Ambient temperature:**
  - When the machine is not operating, the maximum permitted ambient temperature is 150°C.

**ATEX Warning:** The maximum permitted process fluid pressure is 3 bar.

**ATEX Warning:** The unit must **not** be operated in a vessel having an enclosed volume of greater than 100 m³.

**Tanks larger than 100 m³:**
To use Tank Cleaning Machines in tanks larger than 100 m³ is possible under certain conditions. It is necessary to know the current factors such as tank size, cleaning solvent and product. Additives can be used in the cleaning solvent, or, for example, the tank can be filled with nitrogen. The basic rules are described in the guide "IEC/TS 60079-32-1:2013". Following a guidance document such as "IEC/TS 60079-32-1:2013" to establish safe use of machinery and process is the users own responsibility and is not covered by the ATEX certification for this product.

In addition to the above mentioned precautions relating to the ATEX guidelines Directive 94/9/EC valid until 2016-04-19/Directive 2014/34/EU valid from 2016-04-20, the Safety Precautions on page 13 must be observed.
4 Installation

4.6 Installation

The Alfa Laval Toftejorg SaniMxxxx SB clip-on versions are installed on:

- 1" BPE US down pipe (16B102-xx or 16B132-xx)
- 1½" BPE US down pipe (16B152-xx or 16B182-xx or 17Bxxx-xx)
- 2" BPE US down pipe (18Bxxx-xx)

The Alfa Laval Toftejorg SaniMxxxx SB weld-on versions are installed on:

- 1" BPE US down pipe (16B203-xx or 16B233-xx)
- 1"ISO down pipe (16B202-xx or 16B232-xx)
- DIN Range 1 Ø28 down pipe (16B102-xx or 16B132-xx)
- 1½" BPE US down pipe (17B203-xx or 17B233-xx)
- 2" BPE US down pipe (18B203-x0, 18B233-x0, 18B263-x0, or 18B293-x0)

Correct down-pipe dimensions are important to ensure volumetric flow rates as provided in this manual. Clip-on hole centre for 1" must be less than 15 mm (0.59") from the bottom end (recommended 13-15 mm – 0.51"-0.59") of the down-pipe and for the 1½" and 2" less than 34 mm (1.33") from the bottom end (recommended 30-34 mm – 1.18"-1.33"). For weld-on versions no clip hole is needed – the connector (containing the clip hole) is welded on the end of the down pipe.

Important information:

Alfa Laval Toftejorg SaniMxxxx SB weld-on versions:

To continue to meet the requirements of the 3-A Sanitary Standard 78-01, the weld-on version shall be welded onto the end of a straight down pipe. This straight down pipe shall be connected to the supply system in a dismountable manner. This shall allow for easy disassembly and reassembly (e.g. a sanitary clamp coupling) to allow visual inspection (through the down pipe) of the inside of the down pipe and the inside of the connector. Welding must be performed according to relevant 3-A Sanitary Standard.
4.7 Assembly

The Alfa Laval Toftejorg SaniMxxx SB itself is assembled as follows (for the weld-on version, weld the connector onto the down pipe as explained above):

1. Insert the cylindrical end of the stator (3) through the Rotor (2). If the logo is upside down then the rotor is wrongly orientated (see below for correct orientation of logo).

Note: The arrow on the rotor shows the flow direction.

2. The cylindrical end of the stator (3) is then inserted into the centre hole of the Connector (1). The stator can be inserted to its full extent in one position only. When the stator is fully inserted into the connector, the rotor (2) will be fixed between the bearing surface of the stator and connector.

A: Down pipe if weld-on version
3. Having inserted the stator (3) into the connector (1) turn the stator 90° to align the hole in the cylindrical end of the stator with the holes in the connector.

4. **Weld-on version:** Insert the clip (4) through the hole in one side of the connector (1), through the hole in the stator (3) and through the hole on the other side of the connector.

**Clip-on version:** Holding the machine in one hand (hand below the stator) slide the Alfa Laval Toftejorg SaniMxxx SB onto the downpipe. Align the clip holes in the connector (1) with the clip holes in the down pipe, while mounting the clip through the hole in the connector, the down pipe, the stator (3), the other side of the down pipe and finally out through the other side of the connector.
5. Twist the clip (4) around the connector (1) to secure it around the connector.

6. Check that the rotor (2) can be rotated freely by turning it with your fingers.
5 Operation

5.1 Normal Operation

Cleaning Media
Use only media compatible with Stainless Steel AISI 316L and PEEK. Normal detergents, moderate solutions of acids and alkalis are acceptable. Aggressive chemicals, excessive concentrations of chemicals at elevated temperatures, as well as certain solvents hydrochlorides should be avoided. If in doubt, contact your local Alfa Laval sales office.

Note: PEEK is not resistant to concentrated sulphuric acid.

Temperature:
The machine is designed to operate with cleaning media at temperatures up to 95°C (203°F). However, it withstands temperatures up to 150°C (304°F) inside the tank.

ATEX Warning: Atmosphere/surface temperature:
In potentially explosive atmospheres, the temperature must not exceed the maximum surface temperature according to the temperature class for the combustible gas or liquid.

ATEX Warning: Steam cleaning
Tanks with capacities greater than 100 m³ that could contain a flammable atmosphere should not be steam cleaned, as steam issuing from a nozzle could contain charged droplets.
Tanks smaller than this may be steam cleaned providing that: the steam nozzles and other metal parts of the system are reliably earthed and grounded to the tank structure.

Pressure:
Please make sure that the connections are correctly mounted before opening of the washing valve. Apply pressure gradually in order to avoid hydraulic shocks, which might stress mechanical parts in the Alfa Laval Toftejorg SaniMxxx SB cleaner. Max. pressure difference is 4.0 bar. Ideally, use a frequency controlled pump with gradually increase of pumping speed.

ATEX Warning: Steam cleaning pressure
If stream cleaning is done through the machine, the steam pressure must not cause the machine to rotate.

ATEX Warning: Draining
If the machine is drained using compressed air, then the compressed air pressure must not cause the machine to rotate.

After-use cleaning:
After use flush the machine with fresh water. Cleaning media should never allow to dry or settle in the system due to possible "salting out" or "scaling" of the cleaning media. If cleaning media contains volatile chloride solvents, it is recommended not to flush with water after use, as this might create hydrochloric acid.

Warning:
Hot chemicals and steam under pressure may be used for cleaning and sterilising. Protect against scalding and burning. Never tamper with or try to open clamps or other connections while system is in operation. Make sure that system is de-pressurised and drained before disassembly.
In order to keep the tank cleaning machine servicing as an efficient tool in the tank cleaning operations, it is essential to maintain its high performance by following a simple preventive maintenance programme, which will help keep the tank cleaning machine in good condition.

**Good maintenance is careful and regular attention!**

### 6.1 Recommended Service Intervals

The design of the Alfa Laval Toftejorg SaniMxxxx SB asks for little maintenance, as there are no rotating parts in direct contact with stationary parts. It is recommended that inspection is performed after each 500 running hours.

For continuous surveillance of the Alfa Laval Toftejorg SaniMxxxx SB, monitor and log the volumetric flow rate. If the volumetric flow rate increases or decreases by more than 15% over time this could be a sign of wear or blockage of the flow path in certain parts of the machine and the machine should be inspected.

A service consists of:

0. At a pressure of 0.3 bar open a hatch in the tank to verify rotation and liquid fans are emerging from all slots. **ATTENTION:** Use only pure water at normal temperature for safety reasons.

If needed proceed to 1).

1. Un-install the machine (as described on the following pages).
2. Visual inspection for foreign objects. Remove any objects and clean before rotation verification.
3. Visual inspect the bearing surfaces, the holes for the clip-on connection and the width of the slots in the rotor.
4. In case of machine wear, the parts worn down are to be replaced.
5. Look for wear of the slots in the spray head. Recommendation: Replace rotor if slot width (slot at equator on rotor) exceeds SaniMidget SB: 1.2 mm, SaniMagnum SB: 3.2 mm, SaniMega SB 4.2 mm and SaniMega SB high flow version 5.2 mm, as throw length decreases and flow rate increases.
6. Reinstall machine.
7. Fill in the Service Log.

Lists of parts included in the machines are provided on page 28.
6 Maintenance

6.2 Service and Repair of ATEX Approved Machines

All service and repair of ATEX certified machines can be performed by Alfa Laval Tank Equipment, Kolding, Denmark or by an Alfa Laval service center approved by Alfa Laval Tank Equipment.

**ATEX Warning:** In order to ensure compliance with the ATEX regulations and keep the machine ATEX certification valid the service or repair must be performed by an authorized person with knowledge of the ATEX requirements and regulations.

All spare parts must be original Alfa Laval spare parts and the repair or service must be done according to the instructions in the related manual.

If a customer wishes to carry out service or repair himself, it is the responsibility of the repair shop to ensure that the ATEX requirements are met in any way possible. After performing service or repair, the repair shop thus carries the full responsibility for traceability of all relevant documents in order to ensuring the retention of the ATEX certification of the machine.

6.3 Service and Repair of Machines Ordered with Alfa Laval Q-doc

In order to ensure full traceability and to obtain full test documentation (FAT: Factory Acceptance Test), it is necessary to order a new Rotary Spray Head machine with Alfa Laval Q-doc. The new Rotary Spray Head machine will be manufactured and tested (FAT) and shipped to the customer with new Alfa Laval Q-doc for further qualification (SAT: Site Acceptance Test) and validation (PV: Process Validation).
6.4 Dissassembly

Disassemble machine as described on the following pages.

1. Hold one hand under the stator (3) of the Alfa Laval Toftejorg SaniMxxxx SB.

2. With the other hand unlock the clip (4) and withdraw it from the holes to loosen the Alfa Laval Toftejorg SaniMxxxx SB from the down-pipe (for weld-on version: from the connector).

3. Still holding the hand under the stator (3), lower the Alfa Laval Toftejorg SaniMxxxx SB free from the down pipe and remove it from the tank together with the clip (4).

4. When out of the tank, turn the Stator (3) 90° to allow it to be withdrawn from the connector (1).

This completes the disassembly and the four parts (stator, rotor, connector and clip) of the Alfa Laval Toftejorg SaniMxxxx SB can be inspected. For the weld-on versions, the connector (3) is still on the down pipe and shall be inspected on the inside by looking down through the straight down-pipe.

6.5 Reassembly

Reassembly is carried out according to the installation instruction given on page 11.

For Clip-on models, the flow rate is increased by approx. 0.5 m³/h.

**Note:** The curves show the average value of flow rate and throw length. The flow rate can vary up to +/- 10%.

**Note:** The inlet pressure has been taken immediately before the inlet to the machine. In order to achieve the performance indicated on the curves, the pressure drop in the supply lines between pump and machine must be taken in consideration and the water temperature during testing was approx. 20°C.

10 General Information

10.1 Service & Repair

Upon every return of a product, no matter if for modifications or repair, it is necessary to contact your local Alfa Laval office to guarantee a quick execution of your request.

You will receive instructions regarding the return procedure from your local Alfa Laval office. Be sure to follow the instructions closely.

10.2 How to contact Alfa Laval Tank Equipment

For further information please feel free to contact:

Alfa Laval Tank Equipment
Alfa Laval Kolding A/S
31, Albuen - DK 6000 Kolding - Denmark
Registration number: 30938011
Tel switchboard: +45 79 32 22 00 - Fax switchboard: +45 79 32 25 80
www.toftejorg.com, www.alfalaval.dk - info.dk@alfalaval.com

Contact details for all countries are continually updated on our websites
11 Miscellaneous

11.1 Declaration of Conformity with EN 10204

Declaration Of Conformity
with
EN 10204, Sub Clause 2.2 Test Report
Materials of Construction and Surface Finishes

Alfa Laval Kolding A/S (supplier)

declare, under our sole responsibility, that the following product:

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alfa Laval SanMidgat SB rotary spray head</td>
</tr>
<tr>
<td>Alfa Laval SanMagnum SB rotary spray head</td>
</tr>
<tr>
<td>Alfa Laval SanMega SB rotary spray head</td>
</tr>
</tbody>
</table>

have been subjected to non-specific controls for product quality and are found to conform with the following standards and other normative documents:

Metal Materials
AISI 316L

Non-Metal Materials
21CFR § 177.2415 (PEEK)

Surface Finish
All parts are finished with a nominal external roughness Ra = 0.8 μm (30 micro inch).

This certificate is delivered in compliance with the latest valid design and construction. Alfa Laval Kolding A/S reserve the right to alter or modify any unit specification without notice or any obligation.
Non-Specific Controls on Product Quality “As-Supplied”

All metallic part material certifications are inspected upon receipt before assembly.

Parts inspections are completed according to the approved ISO 9001:2008 standard program. The Quality Control Department only accepts the product in component parts for assembly according to this program if the parts comply with the above material specification documentation.

Product welds are executed, inspected and finished (polished where accessible), according to written, approved procedures.

Parts produced from FDA approved polymers are only sourced from suppliers that have met "pre-qualification" standards established by Alfa Laval Tank Equipment's ISO 9001:2008 program. Materials of construction of component parts are controlled through clear and explicit specifications in purchase orders. These specifications include the materials of construction specified by the parts designers, making them subject to the contractual terms and conditions.

The following item numbers are covered by this certificate:

Kolding, Denmark, 2014.01.02

Annie Dahl, QHSE Manager, Alfa Laval

This certificate is delivered in compliance with the latest valid design and construction. Alfa Laval Kolding A/S reserve the right to alter or modify any unit specification without notice or any obligation.
11 Miscellaneous

11.2 Declaration of Compliance for Food Contact Materials

Declaration of compliance for food contact materials

Article Nr:  
TE16BXXX-XX  
TE17BXXX-XX  
TE18BXXX-XX

Product:  
SaniMidget SB  
SaniMagnum SB  
SaniMega SB

We, Alfa Laval Kolding A/S, hereby certify that the plastic articles intended to come into contact with product included in the article stated above comply with the Regulation (EC) No. 1935/2004 and the Regulation (EC) No. 10/2011 both in their relevant versions on materials and articles intended to come in contact with food.

Finished articles subject to an overall migration limit of 10 mg/dm² or 60 mg/kg. The following substances subject to limitations are used in the above stated article:

SML:

PEEK Natur  
Diphenylsulphor: 3 mg/kg food  
1,4 Dihydroxybenzol: 0.6 mg/kg food  
4,4’ Defluorobenzopheneone: 0.05 mg/kg food

Migration from the plastic articles has been investigated by calculations as laid down in paragraph (32) in Regulation (EC) No. 10/2011, to control that the migration limits and other requirements are fulfilled. The articles can be used, within its application area, with all type of foods at batch size above

SaniMidget SB 1": 438 kg*  
SaniMidget SB and SaniMagnum SB 1½": 596 kg*  
SaniMega SB: 728 kg*

We also certify that the plastic articles intended to come into contact with product included in the article stated above are also entirely in accordance with the present US regulation FDA CFR 21§ 177.

Kolding, 18-03-2015

11.4  ATEX - Special Conditions for Safe Use

ATEX CERTIFICATION

EC – Type Examination Certificate Number: Baseefa10ATEX0187X

Il 1GD c T188°C Tamb 0°C to 150°C

BASEEFA CUSTOMER REFERENCE No. 5322
PROJECT FILE No. 10/0602

Special Condition for Safe Use

1. The Unit may be operated, in a hazardous area, only when filled with fluid.
2. If a medium other than the process fluid is passed through the equipment the flow must not be high enough to cause the equipment to operate. If this cannot be avoided the rotor must be removed or secured to prevent rotation.
3. The maximum permitted process fluid temperature is 95°C, with an ambient temperature range of 0°C to +150°C.
4. The maximum permitted process fluid pressure is 3 bar.
5. The unit must not be operated in a vessel having an enclosed volume of greater than 100 m³.
6. The unit must be effectively earthed at all times when in use.
7. The user must address the electrostatic hazards generated from the process of the equipment in accordance with guidance document CLC/TR 50404:2003.

This product fully complies to ATEX category 1 as long as the 5 special conditions above are adhered to.
Please read the above conditions prior to installation & ensure that all conditions are met.

Explanation of T (temperature) rating.
The ATEX classification
