1 EC Declaration of Conformity

Revision of Declaration of Conformity: 2020-02-10

The Designated Company

Alfa Laval Kolding A/S

Albuen 31, DK-6000 Kolding, Denmark

+45 79 32 22 00

hereby declares that

Valve

Designation

SB Pressure Relief Valve

Type

Serial number from AAB000000001 to AAB999999999
Serial number from 100700000001 to 100799999999

is in conformity with the following directives with amendments:

- Machinery Directive 2006/42/EC
- Pressure Equipment Directive 2014/68/EU of the European Community, Category IV
- Pressure Equipment Directive 2014/68/EU of the European Community, Fluida Group II
- EN 4126-1

Conformity Assessment According to Directive 2014/68/EU Annex III Module D
PED Quality Certificate No. QS-005-19 rev2

Notified Body Number: 1336
Inspecta Estonia OU
Teaduspargi 8
12618 Tallinn
ESTONIA

Unsafe practices and other important information are emphasised in this manual. Warnings are emphasised by means of special symbols.

2.1 Important information

Always read the manual before using the valve!

**WARNING**
Indicates that special procedures must be followed to avoid serious personal injury.

**CAUTION**
Indicates that special procedures must be followed to avoid damage to the valve.

**NOTE**
Indicates important information to simplify or clarify procedures.

2.2 Warning signs

General warning: ⚠️

Caustic agents: ⚠️
2 Safety

All warnings in the manual are summarised on this page.
Pay special attention to the instructions below to avoid serious personal injury and damage to the valve.

2.3 Safety precautions

Installation:

Always read the technical data thoroughly (see chapter 6 Technical Data.)
Never touch the moving parts if the actuator for force opening is supplied with compressed air.
Never dismantle the valve or actuator for force opening when under pressure.
Never dismantle the valve when it is hot.

Operation:

Never dismantle the valve or actuator for force opening when under pressure.
Never dismantle the valve when it is hot.
Always read the technical data thoroughly (see chapter 6 Technical Data)
Never touch the moving parts or actuator for force opening when supplied with compressed air.
Never cover or in any way restrict the valve, must be able to work unobstructed at all time.
Always handle lye and acid with great care.

Maintenance:

Always read the technical data thoroughly (see chapter 6 Technical Data)
Never service the valve when it is hot.
Never service the valve or actuator when under pressure.
Never put your fingers between the valve and actuator for force opening.
Never touch the moving parts if the actuator for force opening is supplied with compressed air.

Transportation:

Always ensure that all bolt connections are disconnected before attempting to remove the valve from the installation.
Always drain liquid out of valves before transportation.
Always ensure sufficient fixing of the valve during transportation.
3 Installation

The instruction manual is part of delivery. Study the instructions carefully. The items refer to the Parts List and Service Kits section.

### 3.1 Unpacking/delivery

**Step 1**

**CAUTION**

Alfa Laval cannot be held responsible for incorrect unpacking.

Check the delivery for:
1. Valve seat and disc
2. Lever and weight
3. Bearing pins, washers and locking rings
4. Flange gasket (placed in valve seat)
5. Actuator for force opening (option)
6. Splash guard (option)
7. Proximity sensor (option)

**Step 2**

Remove any packing materials from the valve/valve parts. Inspect the valve/valve parts for visible transport damage. Avoid damaging the valve/valve parts.

### 3.2 General installation

**Step 1**

⚠️ Always read the technical data thoroughly. See chapter 6 Technical Data

⚠️ Always release compressed air from the actuator for force opening after use.

**CAUTION**

Alfa Laval cannot be held responsible for incorrect installation.
3 Installation

The lever and weight are to be assembled with valve seat and disc. Make sure the serial number engraved on the disc matches the serial number engraved on the lever.

3.3 Valve assembly

Pos. 1. Valve seat and disc
Pos. 2. Lever and weight
Pos. 3. Serial number
3 Installation

The lever and weight are to be assembled with valve seat and disc. Make sure the serial number engraved on the disc matches the serial number engraved on the lever.

3.4 Welding procedures for welding flange

Step 1
Spot weld from outside

Step 2
Weld the following sections first from the outside then from the inside, and cool with air between each section.

Spot weld from inside
3 Installation

The lever and weight are to be assembled with valve seat and disc. Make sure the serial number engraved on the disc matches the serial number engraved on the lever.

Step 3
- Ensure that the surface flatness tolerance equals ±0.2.
- Grind and polish the welding flange.

The valve should be seated horizontally. An inclination of max. 10° is acceptable but the lever must then point upwards.
The valve is to be fitted with M16 bolts. The options Splash guard and Force opener are also to be fitted with M16 bolts. The Proximity sensor is to be fitted by the valve’s M6 screws.

3.5 Installation of valve and accessories

Options
1. Force opener*
2. Splash guard
3. Proximity sensor
4. Welding flange

*The force opener is delivered with a spacer kit. Adjust the spacer kit to a recommended gap of 2-4 mm (0.08" - 0.16") between piston and lever.

Tightening torques for bolts:
M16  218 Nm
M6   11 Nm
3 Installation

The valve is to be fitted with M16 bolts. The options Splash guard and Force opener are also to be fitted with M16 bolts. The Proximity sensor is to be fitted by the valve’s M6 screws.

3.6 Recycling information

Unpacking
- Packing material consists of wood, plastics, cardboard boxes and, in some cases, metal straps.
- Wood and cardboard boxes can be reused, recycled or used for energy recovery.
- Plastics should be recycled or burnt at an authorised waste incineration plant.
- Metal straps should be sent for material recycling.

Maintenance
- All metal parts should be sent for material recycling.
- Worn out or defective electronic parts should be sent to a licensed handler for material recycling.

Scrapping
- At the end of use, the equipment should be recycled according to relevant local regulations. As well as the equipment itself, any hazardous residues from the process liquid must be considered and dealt with in a proper manner. When in doubt, or in the absence of local regulations, please contact your local Alfa Laval sales company.
The valve is delivered with counterweight locked by welding to an individual opening pressure to suit the tank design data.

4.1 Operation

Never cover or in any way restrict the valve, it must be able to work unobstructed at all times.
Alfa Laval cannot be held responsible for incorrect operation.
The safety valve is not intended for pressure regulation; a large number of activations can damage the equipment.

<table>

Opening and Closing Characteristics

<table>
<thead>
<tr>
<th>Set pressure</th>
<th>Preset opening pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reset pressure</td>
<td>Closing pressure after discharge</td>
</tr>
</tbody>
</table>

Reset pressure = Set pressure x 0.9 if Set pressure > 1.0 bar (14.5 psi)
Reset pressure = Set pressure - 0.15 bar (2.17 psi) if Set pressure < 1.0 bar (14.5 psi)

Alfa Laval recommends an operating pressure of min. 10% lower than the set pressure value.
4 Operation

The valve is delivered with counterweight locked by welding to an individual opening pressure to suit the tank design data.

4.2 Discharge capacity

In accordance with EN 4126-1
Capacity measured at:
\[ \Delta P = 10\% \text{ Set pressure} \geq 1 \text{ bar (14.5 psi)} \]
\[ \Delta P = 0.1 \times \text{ Set pressure} < 1 \text{ bar (14.5 psi)} \]
4 Operation

The valve is delivered with counterweight locked by welding to an individual opening pressure to suit the tank design data.

4.3 Recommended cleaning

Always handle lye and acid with great care.

Caustic hazard!

Always use rubber gloves!

Always use protective goggles!

It is important that the valve seat is kept clean. Assuming the valve is operating normally, the valve disc is satisfactorily cleaned during the tank cleaning cycle as part of the tank.

It is recommended that the valve is supplied with the option of Force opener and Splash guard.

Force opener For opening of valve during tank cleaning cycle for complete valve seat cleaning.

Splash guard For containing CIP fluid spray from the tank cleaning cycle.
5 Maintenance

The valve is delivered with counterweight locked by welding to an individual opening pressure to suit the tank design data.

5.1 General maintenance

Step 1

⚠️ Always read the technical data thoroughly.
See chapter 6 Technical Data

Step 2

⚠️ Never service the valve when it is hot.

⚠️ Never service the valve with the valve or actuator under pressure.

Atmospheric pressure required!

Burning hazard!

Step 3

⚠️ Never put your fingers between the valve and actuator for force opening.

Cutting hazard!

Step 4

⚠️ Never touch the moving parts if the actuator for force opening is supplied with compressed air.

Moving parts!

Below are some guidelines for maintenance and lubrication intervals.

Valve
To ensure the valve operates correctly, test of function at regular intervals is required. Intervals are dependent on operation conditions and should be specified by the user or local regulations.

Alfa Laval recommend intervals of once every 6-12 months.
O-ring and flange gasket replacement every 2-5 years.

To ensure correct mounting of O-ring, the O-ring should be lubricated with soapy water. Do not use grease, oil or equivalent.

Actuator for force opening
Disassemble, clean and lubricate the actuator every 2-5 years.
O-ring replacement every 2-5 years.
6 Technical Data

It is important to observe the technical data during installation, operation and maintenance. All personnel should be informed about the technical data.

6.1 Technical data

The Pressure Relief Valve is used to minimise the risk of damage to tanks due to liquid overfilling. The Pressure Relief Valve is delivered with counterweight set and locked to suit customer requirements regarding opening pressure. When the pressure in the tank exceeds the preset opening value, the valve relieves the excess pressure. The valve can be equipped with a force opener.
