

Press release

December 2021

New products. New insights. Welcome to the Alfa Laval net-zero launch event.

Alfa Laval is committed to accelerating sustainable solutions for the energy market. Our upcoming launch event will focus on new ways to address some of the most pressing – and conflicting – issues of our day, including the need to decarbonize the global economy while also producing more energy to meet growing demand. The event will also introduce a number of new products that can drastically improve energy efficiency and sustainability.

Alfa Laval's heat transfer and separation technologies are a perfect fit for today's challenges. Few companies in the world are capable of having such an immediate and sustained effect on the need to meet increasing energy demands, while also dramatically reducing carbon emissions.

"This year, during our insight and innovation event, we will invite customers around the world to join us in exploring possibilities related to the theme, *Innovation that accelerates sustainable solutions*. We have an exciting line-up of speakers," says Thomas Möller, Executive Vice President of Alfa Laval's Energy Division. "Each speaker will take us on a deep dive into his or her area of expertise and show us how to bring our commitments to energy efficiency, clean energy, and the circular economy to life in our daily work,"

These three areas – energy efficiency, clean energy, and the circular economy – are the core of Alfa Laval's sustainability offering, and the heart of what the company can help its customers achieve. "We take the time to build lasting partnerships with our customers," continues Möller, "because we know that understanding their businesses is vital to finding ways to help them transition away from the carbon economy and toward greater thermal efficiency. Trying to solve their challenges is what sparks our imagination and drives us toward greater innovation."

The event will summarize the newest challenges we're facing, and how we can meet them. The transition to natural refrigerants with a lower climate impact is a major trend in the global heating and cooling industry right now – and Alfa Laval is leading the way with heat exchangers that are adapted to the new requirements our customers face. Alfa Laval is also home to the latest thinking about the value of material- and resource-efficient processes, which may be the smartest way to boost profits, cut costs, and improve sustainability – a trifecta of benefits that every company would agree they need.

The event is also about sharing experiences from new initiatives, including those from Zero Liquid Discharge, as well as from the Alfa Laval Service centre team, which will also be featured.

Last but not least, the latest fuels and technologies, including the green hydrogen value chain, renewable diesel, and Alfa Laval's cutting-edge new heat exchangers, the ACK540 range, AC65, TS45, and PCHE Hybloc™ will also take centre-stage.

For anyone who hopes to be part of the solution in building a brighter future, Alfa Laval's net-zero launch is truly a no-miss event.

The event takes place on February 16, 2022 at 14.00 CET (English version) and February 18 2022 at 09.00 CET (Chinese version).

Editor's notes

Alfa Laval is active in the areas of Energy, Marine, and Food & Water, offering its expertise, products, and service to a wide range of industries in some 100 countries. The company is committed to optimizing processes, creating responsible growth, and driving progress – always going the extra mile to support customers in achieving their business goals and sustainability targets.

Alfa Laval's innovative technologies are dedicated to purifying, refining, and reusing materials, promoting more responsible use of natural resources. They contribute to improved energy efficiency and heat recovery, better water treatment, and reduced emissions. Thereby, Alfa Laval is not only accelerating success for its customers, but also for people and the planet. Making the world better, every day. It's all about *Advancing better*™.

Alfa Laval has 17,500 employees. Annual sales in 2019 were SEK 46.5 billion (approx. EUR 4.4 billion). The company is listed on Nasdaq OMX.
