

Emergency Kits for Alfa Laval Gas Combustion Units

Immediate access to safety-critical spare parts

Your Alfa Laval Gas Combustion Unit (GCU) is central to boil-off gas management on your LNG carrier or FSRU. Vessel safety depends on its operation, so let us ensure that the right critical spare parts are on board. Our GCU Emergency Kits provide self-install parts to restore GCU operation if a problem arises.

Self-install parts for a quick return to uptime

GCU Emergency Kits make vital OEM spare parts available for immediate access. If a problem should occur with your GCU, having a kit on board will enable the crew to bring it back to an operating state.

Because all critical parts are included, the kit will ensure that everything is on hand, even before the problem is identified. Our service team can guide the crew to a solution by phone or e-mail, and enhanced remote support is available if you also use our Digital Services for Gas Combustion Units. All this means a fast return to uptime, without waiting for parts or scheduling an additional service visit.

Benefits

- Immediate availability of OEM spare parts
- Minimized downtime and safety risk
- Issues resolved by crew with only remote assistance from Alfa Laval
- No rush order fees or additional freight charges

GCU Emergency Kit contents

Exhaust stack parts

- Pressure transmitters
- Flame detector
- Thermocouples

Gas valve train parts

- Solenoid valves

Combustion chamber parts

- Spark igniter
